

Abstract of the Disclosure

A marine or aviation tool for moving and replacing a marine or aviation cover having a pair of spaced holes as a pair of pins which are adjustable to be aligned with the holes. The pins extend from head having socket therein for receiving either extender which cooperates with ratchet wrench handle or another extender which cooperates with a screw gun drill so that one has the option of rotating the head directly as a key or operating the head remotely. The head includes a VELCRO® patch for coupling with a mating VELCRO® patch on the cover so that after the cover is removed it remains attached to the head will not fall overboard due to broken chain.
